APPENDIX 1. HOW TO FIND A CHARACTER

Some three centuries ago the Chinese evolved a system of classifying their characters according to 214 basic elements or radicals. The system was based partially on the character's shape and composition and partially on the meaning of the character. Thus, although most characters involving the enclosure 門 (Rad. 169-gate) are to be found under that radical, 聞 4732 is classified under 耳 (Rad. 128-ear), presumably because hearing is done with the ear. This system is still used today in Chinese, Korean, and Japanese character dictionaries and is followed in the present dictionary also. There have been a large number of attempts to reclassify the characters, either under a new radical system or under a redistribution of the characters within the traditional system. One drawback of these attempts is that it is difficult for one who has learned one of the revised systems to use a traditional Japanese, Korean, or Chinese character dictionary; another in that it separates different versions of the same character that differ only in the arrangement of their component elements. Finding the radical, then, is not a deterministic process and may require some trial and error.

1. Determine the radical of the character (see Appendices 3, 4, 5, and 6), count the strokes of the radical, and find the radical number on the chart inside the front covers.
2. Spin the pages of the dictionary till you come to that radical number in the upper, outer corners of the pages.

Another method, replacing the foregoing two steps (this short cut is recommended only for those familiar enough with the radicals to realize immediately that, for example, the common 3-stroke grass radical is actually a variant of the 6-stroke grass radical—No. 140—and is to be looked for under the larger stroke-count): Having determined the radical and without worrying about its number, spin immediately to the place where all the radicals of the same stroke-count appear in the marginal radical strings, the stroke-count being shown by the large numeral at the head of each string. (*In case of a variant radical, use the stroke-count of its parent radical.*) Now find your radical in the radical string and spin the pages slowly one way or the other till the brackets moving up and down the string reach your radical.

3. Count the number of strokes in the non-radical part of the character and then, as a guide to the eye, place your thumb near the proper radical in the radical string and slowly spin the pages one way or the other till the tiny numeral opposite your radical reaches your stroke-count.
4. Glance through the main-character entries nearby to find the one you want; it will be somewhere in those pages with the proper non-radical stroke-count as indicated either by the tiny marginal numeral or the large numerals in the column-wide dividers. Within any given stroke-count section, the main character entries are arranged with cross-reference and rarer characters first, followed by the more familiar characters in the ascending order of the number of compounds listed under each.

APPENDIX 2. HOW TO FIND A COMPOUND

1. Find the first character of the compound by the procedure described in the preceding appendix.

3. How to Determine the Radical of a Character

2. Count the total number of strokes in the second character and then glance down the series of superscript numerals immediately to the left of the list of compounds till you find the proper second-character stroke-count.

3. Look for the second character of your compound among those with this stroke-count. In listing each compound, its first character has been omitted since it is the same as the character shown in the main entry above it. Note also that the character-repetition sign (々) has not been used; since the first character is omitted in listing compounds, in such cases it was felt better to repeat the full character.

4. If there are many compounds listed under the same second-character stroke-count, time can be saved by keeping in mind that within such a grouping the compounds have been arranged in the following order: (a) 2-character compounds, (b) 3-character compounds, (c) 4-character compounds, and (d) “families” of compounds, i.e., a group of compounds whose second characters, as well as the first, are identical.

5. If you cannot find your compound, possible reasons and remedies are:

(a) You may have miscounted the strokes of the second character. So look for it up and down the adjacent stroke-count groups.

(b) The second character of your compound may be in a variant form that differs in shape, and probably in stroke-count as well, from the standard form used in the compounds of this dictionary. For example, it may be a Jōyō Kanji given in its older form, while in our lists of compounds all Jōyō Kanji appear only in their newer forms. Or again, it may be a non-Jōyō Kanji in which, according to the unauthorized usage of some printers, one element has been simplified by analogy with the same element in a Jōyō Kanji, while in our lists non-Jōyō Kanji usually appear only in their original forms. To have included such variations in our lists would have led to endless duplication of entries. But we do give the important variants in our main-character entries. Hence, the surest remedy, which is unfortunately also the most time-consuming, is to look up the second character of your compound in the main-character entries, there ascertain its standard form, and then look for such standard form in your list of compounds. But we recommend first checking quickly through the same stroke-count group and the immediately adjacent groups for a character that looks almost the same as the one you are looking for. This method will usually work when the variation is slight.

(c) The word may be one of the less frequently used ones which do not appear in this dictionary. So either look for it in one of the large Japanese character dictionaries (the M numbers provide ready reference to Morohashi’s dictionary) or determine its probable reading by looking up the individual characters of which it is composed and then consult a Japanese-English romanized dictionary like Kenkyūsha’s.

(d) In the case of a compound of three or more characters, it may be a “compound compound.” So try, for example in the case of four characters, looking for separate compound forms of the first two and the last two.

APPENDIX 3. HOW TO DETERMINE THE RADICAL OF A CHARACTER

Those who are familiar with character dictionaries know how difficult it often is to decide which is the radical of a character. This is due to the fact that nearly every character, excepting only a few, contains from two to seven or eight radicals. The character 截, for example, contains the following seven elements, each of which hap-

3. How to Determine the Radical of a Character

pens to be a radical (the radical numbers are shown in parentheses): 一 (1), | (2), 丶 (3), 丿 (4), 十 (24), 戈 (62), 隹 (172). So it is anybody's guess as to which of these is the traditional radical under which this character would be listed. (In fact, it is listed under 戈 62.) The process of deciding under which radical to search is far too often a time-wasting and discouraging trial-and-error process. We believe that we have solved this problem with the introduction of the **Universal Radical Index**, Appendix 15. The URI allows character look-ups based on virtually any reasonable radical element found in the character. Aimed primarily at the novice user, but useful to anyone frustrated by obscure radicals and difficult-to-remember "radical priorities," the URI lists characters (including characters which consist of one and only one radical) under multiple alternative radicals and plausible miscounts of residual strokes. The following 12 steps run from most likely to least likely radical placement. The rules are not absolute, but are guidelines that will generally lead the user to the correct location. If the character is not found in the first or second try, the user may wish to resort to the Universal Radical Index.

THE 12 STEPS. If you follow these steps, you will be able to choose the radical correctly in most cases and, after a little practice, almost instantaneously. (The numerals given below in parentheses show the numbers of the radicals.)

N.B. If there are two radicals in the same designated position, always take the one with the GREATER stroke-count.

STEP 1. ALL? *Is ALL the character a radical?* For a complete listing, see Appendix 13. Here are a few examples:

土(32), 方(70), 生(100), 米(119), 辛(160), 高(189), 鼻(209).

STEP 2. LONE? *Does it have only one lone radical?*

乂 (3), 乃 (4), 久 (4), 了 (6)

STEP 3. ENCLOSURE? *Does it have a completely exterior ENCLOSURE radical?* The enclosure may cover two, three, or four sides.

Examples of characters containing all the radicals that *enclose two sides* (the radicals and their numbers shown in parentheses):

勿(20), 原(厂 27), 局(尸 44), 度(广 53), 廻(54), 式(弋 56),
成(戈 62), 房(户 63), 死(尸 78), 毳(毛 82), 气(气 84), 爬(爪 87),
𠂔(98), 病(疒 104), 虎(虍 141), 起(走 156), 辱(辱 161), 速(辶 162),
飗(風 182), 魁(鬼 194), 麝(鹿 198), 麴(麦 199), 磨(磨 200), 鼬(鼠 208)

Examples of all the radicals that *enclose three sides*:

冂(13), 凶(17), 医(匚 22), 閉(門 169), 齋(齊 210)

Example of the one radical that *encloses four sides*: 国(31)

STEP 4. LEFT? *Is there a clearly defined LEFT radical?* By "clearly defined" we mean a radical that completely dominates the left side, i.e., one that is unobstructed both above and below, such as 十 in 協. It follows that in the character 截, for example, neither 十 nor 隹 can be chosen as a left radical. Some other examples:

偉—both left and right are radicals; take the left, 亻 (9).

准—both left and right are radicals; take the left, 冫 (15).

杉—both left and right are radicals; take the left, 木 (75).

3. How to Determine the Radical of a Character

鈞—right not a radical, take the left, 金 (167).

STEP 5. RIGHT? *Is there a clearly defined RIGHT radical?*

和—both left and right are radicals; take the right, 口 (30).

彫—left not a radical; take the right, 彡 (59).

欧—left not a radical; take the right, 欠 (76). Note that we ignore any slight interference with the left by a left-tapering stroke.

頂—left not a radical; take the right, 頁 (181).

STEP 6. TOP? *Is there a clear TOP radical?* Examples:

空—take the top, 穴 (116). Note that we take this in place of 宀 (40) because in general it is advantageous to take the more complex of two similarly placed radicals.

云—take 二 (7).

公—both top and bottom are radicals; take the top, 八 (12). Note that Rad. 12 appears in three forms 八, ㄟ, and ㄨ.

兼—take 八 (12).

套—take 大 (37).

安—both top and bottom are radicals; take the top, 宀 (40).

男—both top and bottom are radicals; take the top, 田 (102).

Note that many top radicals are closed canopies like 人, 冖, 大, 宀, or 穴.

STEP 7. BOTTOM? *Is there a clear BOTTOM radical?* Note that this may or not be resting under a canopy. Examples:

急—top not a radical; take the bottom, 心 (61).

思—both top and bottom are radicals; take the bottom, 心 (61).

学—top not a radical; take the bottom, 子 (39).

嚮—top not a radical; take 口 (30) at the bottom under the canopy.

劈—top not a radical; take the bottom, 刀 (18).

朶—top not a radical; take the bottom, 木 (75).

STEP 8. NW? *Is there a radical in the NORTHWEST corner?* Examples:

報—Going down our table of steps, we find this is neither ALL, LONE, ENCLOSURE, LEFT, RIGHT, TOP, nor BOTTOM. So we start around the corners clockwise beginning in the NORTHWEST, and there sits 土 (32). This is our radical. There is also 十 (24) in that same corner; but remember, we generally take the more complex of two possible radicals.

梵—The character is not a radical in its own right, has no enclosures, and does not divide into left and right portions. It does divide into top and bottom, but the top as a whole is not a radical, nor is the bottom. Take 木 (75) at the upper left (NW) corner.

STEP 9. NE? *Is there a radical in the NORTHEAST corner?* Example: 吳—bottom is also a radical, but take the upper right (NE) corner, 口 (30).

STEP 10. SE? *Is there a radical in the SOUTHEAST corner?* Example: 君—Here again we find that 口 (30) is the radical in the SE corner. Note that this is not the case of a lone radical because we also have radicals 丿 (4), 一 (1), 尸 (44), and ㄣ (58).

STEP 11. SW? *Is there a radical in the SOUTHWEST corner?* Examples:

糴 The upper right, lower right, and lower left (southwest) corners are all radicals; take the lower left, 米, (119)

4. More about Radicals

糴—All four corners are radicals; here, too, take the southwest corner radical, 米, (119).

虱 At first glance, the upper right element may look like an enclosure, however, it is not a radical and we are lead to the lower left corner, 虫 (142).

STEP 12. INSIDE? *Is there a radical in the INTERIOR of the character?* Examples:

周 One would expect the enclosure 冂₍₁₃₎ to be the relevant radical, but the character is to be found under the bottom inside, 口₍₃₀₎. In the URI, this character is listed under 冂, 口, and 土.

巡 The obvious radical is 辶₍₁₆₂₎, but the character is traditionally classified under 卂₍₄₇₎.

APPENDIX 4. MORE ABOUT RADICALS

MISCELLANEOUS EXAMPLES OF RADICALS. The following table, arranged by the twelve steps given above, illustrates the process of finding the radical for a given character. In general, following the eleven steps will lead to finding the character quickly and easily. Usually a top radical will be preferred to a bottom one, a left radical to a right one, and an enclosure to the inside, but not every time. When in doubt, consult the Universal Radical Index, where each character is listed under all of its likely radicals.

IMPORTANT RADICALS. Here are the 67 radicals that you will most often encounter. They are classified by stroke-count and arranged by their numbers. It will definitely be worth your while to memorize their numbers and recommended “nicknames” which accompany them. Note that only the parent form of each radical is shown here; consult Appendix 5 and the chart inside the cover for important variant forms.

WARNINGS ON UNUSUAL RADICALS. It is well, occasionally, to look over the Step-1 table of Appendix 13 in the book to refresh your memory as to which current characters are their own radicals.

Remember that 乚 is a variety of 𠃍 (Rad. 58).

Note the distinct difference between Rads. 71 and 92 as shown on the chart inside the front cover. 牙 is a 5-stroke variant of the 4-stroke 𪔐 (92) and it is encountered more often than the parent. 𠂔 is a 5-stroke variant of the 4-stroke 𠂔 (71) and it is also encountered more often than the parent.

Note that 𠂔 (114) is a 5-stroke, not a 4-stroke, radical and is always counted as 5 whenever it appears in any character.

Remember that 豕 is a 6-stroke variant of the 7-stroke 豕 (152).

Glance over the chart inside the front cover beginning with Rad. 187 and note the many radicals in the 10- to 17-stroke categories. You will encounter them more or less frequently.

Let us repeat that it is very important to be able to recognize a radical when you see one, even though you may not be able to recall its name or its number.

When you are not sure whether an element of a character is a radical or not, consult the chart inside the front cover or the tables in Appendix 13.

LOST RADICALS. In the simplification of characters by the Japanese Government, some have actually lost their traditional radicals, making them most difficult to find in ordinary dictionaries. These have been reclassified according to the standard practice of Japanese character dictionaries and have been entered into the Universal Radical Index.

The following table gives a representative list of characters that have lost their radicals. Each entry shows, first, the original form of the character followed by its traditional radical (now lost) and radical number; and then, following an arrow, are given the present simplified form of the character, the number under which it is entered in this dictionary, and the radical and radical number under which we classify it.

APPENDIX 6. HOW TO COUNT STROKES

Nothing will so much speed up your dictionary work as skill and accuracy in counting strokes, whether of whole characters, radicals, or non-radical elements. Therefore, every effort has been made in this dictionary to make this process free of guesswork. In this connection, some knowledge of how to write characters is needed; such a study is outside the scope of this dictionary, but an excellent treatment can be found in *A Guide to Reading and Writing Japanese* edited by Florence Sakade (Tuttle, 1959).

ACCURACY. The general rule is: No matter how a line may twist and turn nor how complex its printed form, if it is written without lifting your pencil, count it as a single stroke. Examples:

2 strokes: 乃, 乚, 𠂇

3 strokes: 及, 与, 𠂇, 弓

STROKE DETAILS TO BE IGNORED. Because of variations in type fonts and other practical considerations the following details are ignored in counting strokes:

1. *Ignore* the little flip at the bottom of the element 丿 as found in such characters as the following, thus giving them the stroke-counts shown in parentheses; in hand-written characters, such a little flip is a mere continuation of the vertical member above it and even in printed form it seldom touches or cuts through the next element to the right: 良 (7), 卯 (5), 留 (10), 以 (4), 似 (6), 民 (5), and especially in characters traditionally belonging to the 6-stroke radical 衣, such as 衾 (10), 袈 (11), 袋 (11), and 裂 (12). It also follows logically not to count the similarly situated flip in such characters as 表 (8), 喪 (12), or 畏 (9). *However*, we do count a similar stroke in the following three pairs of characters as the said stroke either cuts through or takes a firm grip on the next element to the right: 叫 或 叫 (6); 収 (5) 或 收 (7); and 糾 (9).

2. *Ignore* the little protrusion in the elements 勹 and 勹 as found in such characters as the following, counting these as 1 and 2 strokes respectively, especially so since in some type fonts the protrusion is scarcely visible: 考 (6), 顙 (18), 互 (4), and 祿 (12).

3. *Ignore* the downward protrusion of 口 as found in characters like the following in some fonts: 啼, 鳴, 啞. We still consider the left member the radical, i.e., 口 (30). The element 丰 is counted as three strokes, in 韋 (Rad. 178), but it is usually counted as four strokes.

4. *Ignore* any interference with another member of a character (usually a left radical) by a left-tapering stroke as such vary in length. These usually involve the radical 口 and examples follow: 吸, 呖, 吹, 呱, 喫, 喀, 每.

7. Hints for Speed

5. *Ignore* the slight left interference with a left radical of an ichi (一) stroke at the bottom of such characters as 岨, 阻, 組, and 粗.

6. *Ignore* any interference of any slightly hooked stroke like the horizontal element in the character 予, where we take 丿 (6) as the radical.

COUNTING STROKES OF PARENT RADICALS AND THEIR VARIANTS.

1. The stroke-count of a *parent radical* is always that shown in the chart inside the front cover. Thus the following radicals whose stroke-count, at least in the printed form, appears to differ from that historically assigned to them are always given the stroke-count indicated in the following examples: 𠂇 (3), 厶 (2). Thus when the element 厶 appears in the character 宏, it is counted as 2 and not 3 strokes, making this character one of 7 strokes, not 8.

2. *Radical variants*, however, always carry their natural stroke-count wherever they appear. Thus the parent radical 水 is always a 4-stroke element but it has the following variants which carry the indicated stroke-counts: 氵 (3), 氷 (5). Similarly:

Rad. 92, a parent radical of 4 strokes (牙), has a 5-stroke variant in 牙.

Rad. 64, a parent radical of 4 strokes (手), has a 3-stroke variant in 扌.

Rad. 61, a parent radical of 4 strokes (心), has a 3-stroke variant in 忄.

Rad. 125, a parent radical of 6 strokes (老), has a 4-stroke variant in 耂.

Rad. 152, a parent radical of 7 strokes (豕), has a 6-stroke variant in 豸.

Rad. 140, a parent radical of 6 strokes (艸) has a 3-stroke variant in 艹 and a 4-stroke variant in 卄. The latter, however, is always counted as 3 strokes as it is often impossible to detect the space between the two crosses.

APPENDIX 7. HINTS FOR SPEED

Much has been done in the arrangement of this dictionary to speed up the process of finding a character. But much will also depend upon the user, and here a little effort will pay great dividends. When one is reading a Japanese book or magazine, speed in looking up a new word is of the essence if the chain of thought is not to be interrupted. Several suggestions to this end:

Spinning the pages of this book, which has been made strong and flexible for this very purpose, will often get you to your character almost immediately. Many of you will soon have memorized many radical numbers and you will spin quickly to the correct radical area. Some of you will prefer to spin to the proper radical string and locate your radical there. Having located your radical in its proper string, you will now spin again, and perhaps more slowly, until the heavy brackets scurrying up and down the strings crawl around your radical. Spinning further and a bit more slowly, you will see the tiny numeral beside the radical change to the stroke-count of the non-radical part of your character and your compound will not be far away. For you have now arrived at the proper stroke-count group, wherein the characters are arranged in the ascending order of the number of their compounds.

Quick stroke-counting is important in the speeding-up process. You will soon learn the stroke-counts of the more common radicals as you will be using them frequently, and you should also make an effort to memorize the stroke-counts of other elements which, though not radicals, reoccur frequently. Then make a habit of counting the strokes by mentally adding up the number of strokes of their larger components. For example, in 截 you should not laboriously count the strokes one by one but as follows: 2(十) + 4(戈) + 8(隹) = 14.

A *good magnifying glass* is most helpful in counting strokes, especially when reading type that is small or not clear.

All *cross references* are in the *Arabic notation* and refer to the serial numbers of

8. The Kana Systems

the 7107 numbered character entries. These character numbers also appear conveniently at the lower outer corners of the pages, a contribution to speed.

Whenever you are not sure whether an element of a character is a radical or not, consult *the chart inside the front cover* or Appendix 13.

By all means familiarize yourself with the 214 historic radicals as given inside the front cover so that you can always recognize a radical when you see one. And if you wish to quadruple your speed in dictionary work, memorize their numbers. Missionaries in China used to do this as a matter of course during their first year of language study. A few brave souls in Japan have also done so. You should at least memorize the 67 more important radicals as given in Appendix 4.

APPENDIX 8. THE KANA SYSTEMS

There are two syllabaries in Japan, called *kana*. One of these is *katakana*, or the squared form, and the other is *hiragana*, or the cursive. They are arranged in two ways, one the A-I-U-E-O, or systematic, arrangement, and the other, the I-RO-HA arrangement, which forms a poem on the Buddhist theme of the transitoriness of life. This latter arrangement is still occasionally used in indices, outlines, and the like, much as the alphabet is used in the West; however, it is rapidly giving way to the easily remembered A-I-U-E-O arrangement.

Katakana are used much like italics are used in English. However, *katakana* are also used to write foreign names and most foreign words that have entered the Japanese language. Additionally, many plant and animal names, as well as onomatopoeia, are usually written in *katakana*. *Hiragana*, however, are more widely used, particularly as *okurigana* to indicate the inflections of verbs and other words whose stems are written in characters. With the limitation of the use of characters since WWII, many words previously written in *kanji* are now written in *hiragana*. Formerly, and to some extent today, *hiragana* have been used along the side of the text to indicate the pronunciation of the characters. When used in this way, they are called *furigana* or *rubi*.

A roughly literal paraphrase might run as follows: “Colors are fragrant, but they fade away. In this world of ours none lasts forever. Today cross the high mountain of life’s illusions [i.e., rise above this physical world], and there will be no more shallow dreaming, no more drunkenness [i.e., there will be no more uneasiness, no more temptations].”

SOUND CHANGES. The sounds of the basic *kana* given above, as well as of the *kana* combinations treated hereafter, may be changed in any one of three ways, or in a combination of these ways. (Note that, although all the examples below are given in *hiragana*, the same remarks apply to *katakana* unless otherwise indicated.) The three ways are listed below.

1) By lengthening the vowels. This is done in *hiragana* by adding the appropriate vowel *kana* to sounds ending in *a*, *i*, *e*, or *u*. In the case of sounds ending in *o*, usually the *kana u* is added, but for certain words, it is the *kana o* that is added. For example, か *ka* becomes かあ *kā*; き *ki*, きい *kī*; く *ku*, くう *kū*; ね *ne*, ねえ *nē*; and と *to*, とう *tō* or とお *tō*. In *katakana*, the lengthening of a vowel is indicated by a dash-like symbol in place of the additional *kana*. For example, カ *ka* becomes カー *kā*, etc.

2) By inserting a small つ *tsu* before a *kana* beginning with *k*, *s*, *t*, or *p*, thereby doubling that consonant. For example, また *mata* becomes まった *matta*.

3) By adding two kinds of diacritical marks to certain of the *kana*, to represent other sounds. The first of these two, ˘, is called *dakuten* (literally, “voice marks”),

8. The Kana Systems

and the second, °, is called *handakuten* (literally, “half voice marks”). Their use is illustrated below.

KANA COMBINATIONS. Certain *kana* clusters represent given combinations of sounds. The modern combinations are shown below. Note that the preceding sound change rules also apply here.

In addition to the modern *kana* combinations given above, there are certain historical combinations which were used in pre-WWII writing. Though no longer approved, they are still occasionally encountered. Following is a list of many such historical *kana* combinations, in the A-I-U-E-O arrangement, and likewise subject to the sound change rules; also included are a few single *kana* which had special pronunciations in certain words, instead of the standard modern pronunciations shown in parentheses.

APPENDIX 9. HISTORICAL TABLES

CHINESE DYNASTIES AND PERIODS. Listed here are the more important of the Chinese dynasties and historic periods. The principal sources used for compiling this table were Edwin O. Reischauer's *Chronological Chart of Far Eastern History* (Harvard Press, 1947), René Grousset's *Chinese Art and Culture* (Orion Press, New York, 1959), and R. H. Matthews' *Chinese-English Dictionary* (Harvard Press, 1950). There is often some question as to exactly when a given dynasty began or ended; in such case the *circa* abbreviation has been prefixed to the date, while the question mark indicates rough conjecture. Japanese readings are given in italics following the Chinese characters.

PERIODS OF JAPANESE HISTORY AND ART. There is often little agreement as to the exact nomenclature for and the years covered by the various periods of Japanese history and art. As a rough guide, the chart presented here has been prepared from the following sources:

- (1) G. B. Sansom: *Japan: A Short Cultural History*. Appleton-Century-Crofts, New York, 1943, p. xviii. This list gives the classification of art periods adopted by the Art Research Institute of Tokyo.
- (2) Edwin O. Reischauer: *Chronological Chart of Far Eastern History*. Harvard Press, Cambridge, 1947. This is a chart of political rather than art periods.
- (3) Chronological chart of art periods published by the Japanese Art Dealers' Association, Tokyo, 1958.
- (4) Andrew N. Nelson: *The Origin, History, and Present Status of the Temples of Japan*. Unpublished doctorate thesis, University of Washington, Seattle, 1938.
- (5) Suwa Tokutarō: *Nihonshi no Yōryō* (Outline of Japanese History). Ōbunsha, Tokyo, 1957.
- (6) Toyota Takeshi: *Yōsetsu Nihonshi* (Japanese History Outline). Chūkyō Shuppan, Tokyo, 1964.

The numerals in parentheses in the chart refer to the foregoing sources.

JAPANESE SHOGUNATES. Here again there is often reason for choosing different dates. In this case we follow Tōkyōdō's *Sekai Jimmei Jiten: Tōyō Hen* (1952, p. 922), which consistently begins each period with the formal nomination of its first shogun and ends it with the abdication or death of its last shogun. Note that the first three entries are usually known collectively as the Kamakura Shogunate; during much of this period the shoguns themselves had no real power, being ruled in turn by the Hōjō regents from 1205 to 1333.

JAPANESE EMPERORS AND ERA NAMES. The following list of the Japanese sovereigns, together with era names (*nengō*), begins with the legendary first emperor, Jimmu. Much of the early chronology before the introduction of writing is legendary rather than historical. Japanese textbooks now usually begin such a list with Emperor Kimmei (reigned 539–571). But legends often play an equal role with history in a nation's literature, and it has been thought well to give the full traditional list.

The list is based on three sources. Nippon Hōsō Kyōkai's *Songō to Nengō no Yobikata* (1953), being based on studies with the Imperial Household, has been taken as the final authority for the reading of all names and for the era dates. Reign dates have been taken from Tōkyōdō's *Sekai Jimmei Jiten: Tōyō Hen* (1952, pp. 919–22) and Shinchōsha's *Shukuyaku Nippon Bungaku Daijiten* (1955, appendix pp. 1–92).

Asterisks indicate empresses. The system of era names was not adopted until the time of the 36th emperor, and there is some confusion regarding the first few eras. Reign dates show: (1) the year of actual accession to the throne if known and, in parentheses, of formal coronation, but the latter date is not repeated when it is the same as the former; and (2) the year in which the reign ended, whether by death or abdication. An era date shows the first year of the era. Era names are indented beneath the names of the respective emperors.

APPENDIX 11. FOREIGN GEOGRAPHICAL NAMES

For Chinese and Korean place names the Japanese have customarily used the original Chinese characters with Japanese *on* readings as given in the two immediately following lists, but there is a growing tendency to indicate the current Chinese or Korean pronunciations in *katakana*. The Pinyin pronunciations of the Chinese place names are also given. In the case of Western names, for which the characters in the third list were formerly used, the present tendency is to transcribe them phonetically in *katakana*, but the older literature is, of course, always with us.

Although when used today the characters of the names in all three lists would be subject to the Jōyō Kanji rules, they are given here in their older forms since,

11. Foreign Geographical Names

particularly in the case of the third list, they are more likely to be encountered in the old literature. Those names in the third list that are the most commonly used today are indicated with asterisks.

APPENDIX 13. JŌYŌ KANJI LISTS

For convenience, particularly when studying characters, we have gathered into this appendix a complete listing of all the Jōyō Kanji as established by the Japanese Government, arranging them under three headings: essential characters, general use characters, and additions for proper names. Also shown, for purpose of speedy reference, is the number under which each character has been listed in the body of this dictionary.

1006 ESSENTIAL CHARACTERS. These have been marked with a small capital A in the body of this dictionary and are here arranged according to the elementary school grades in which they are taught; within each grade the characters are arranged in the order in which they appear in this dictionary.

APPENDIX 14. THE ON-KUN INDEX

This *on-kun* index is a romanized listing of all the *on* (Sino-Japanese) and *kun* (native Japanese and foreign) readings of all the individual characters in alphabetical order. Also included are unpredictable compound readings (e.g., *asu* for 明日). The compounds listed here are only those with readings that are unpredicable given the readings listed in this dictionary. In many cases, there are other compounds that are used to write the words spelled out by these unpredicable compounds using predictable readings of their component characters. These common, predictable compounds may be found in any large Japanese-English dictionary. The order of each entry is as follows: the *ON* (in small capitals) or *kun* (in italics) followed by the various characters having that reading and the Nelson number of each character. Compounds are indexed by Nelson number followed by the stroke-count of the second member of the compound (e.g., 明日 2435.4). In this index, okurigana have not been marked by parentheses, as was done in the entries in the body of the dictionary. As in the body of the dictionary, prefixes, suffixes, verbs, and phrases are printed in italics along with the *kun* readings for simplicity's sake, even though they may contain *on* readings within them.

APPENDIX 15: THE UNIVERSAL RADICAL INDEX

One of the innovative features of the revised Nelson's character dictionary is the **Universal Radical Index**, which allows character look-ups based on virtually any reasonable radical element found in the character. Aimed primarily at the novice user, but useful to anyone frustrated by obscure radicals and difficult-to-remember 'radical priorities,' the URI lists characters (including characters which consist of one and only one radical) under multiple alternative radicals and plausible miscounts of residual strokes. To further facilitate look-ups, three nonce radicals "frequently recurring graphical elements that do not have official status" have been added to the traditional 214 radicals. These three have been added at the end of the traditional list and consist of Rad. 301 *ク kana ku*, Rad. 302 *マ kana ma*, and Rad. 303 *santen-gammuri*, (as in the three dots on top of characters such as 覚 and 巢); the numbering serves to clearly distinguish these three as artificial classifiers.

Using the URI requires the reader to identify a salient radical or radical-like element in a character and to count the residual strokes as if doing a traditional character look-up. Each character is then referenced to the place it occurs in the body of the dictionary, which follows traditional radical and stroke-count order. For example, the character 稲 can be found by five means: Rad. 115 plus 9 residual strokes (its traditional listing), Rad. 2 plus 13 residual strokes, Rad. 87 plus 10 residual strokes, and either Rad. 72 or 73 plus 10 residual strokes. The one-radical character 黒 can be accessed not only via the traditional Rad. 203 plus 0 residual strokes, but also by Rad. 86 plus 7 residual strokes, Rad. 102 plus 6 or 7 residual strokes, Rad. 32 plus 8 or 9 residual strokes, and Rad. 166 plus 4 residual strokes. The URI also facilitates searches in cases where unsuspected traditional radicals might frustrate even the experienced user: 聞 is listed under both Rad. 128 plus 8 residual strokes and also under Rad. 169 plus 6 residual strokes.

Attention to detail and a forgiving attitude toward inexperienced users has resulted in an index in excess of 30,000 individual listings, or roughly four to five for any given character. Certain constraints had to be observed, however, to keep the size (and reasonableness) of the index manageable. Not every horizontal line means a character gets listed under Rad. 1, nor is every vertical considered an occurrence of Rad. 2. Attention has also been paid to the relative prominence of radicals and the likelihood of their being recognized as such. Thus, while Rad. 120 characters are never cross-listed under Rad. 52, Rad. 95 characters consistently are.

For each entry the JIS code and the Morohashi index number have been given, together with the Nelson number. Each entry includes the JIS code prefixed with J, and the Morohashi index number with M. For example, the entry 立 is followed by

J4267
M38703 2610.

In general, the compilation of the index has followed these conventions:

- Use of single-stroke radicals has been limited to cases where the radical either does not touch any other element in the character or extends all the way through the character. Despite these constraints, many hundreds of characters can be located by keying to these simple radicals.

- Characters containing radicals which overlap completely or nearly completely in form with another radical (cf. Rad. 22 & Rad. 23; Rad. 72 & 73; Rad 74 & 130) are usually listed under both possible radicals in the index.

- Characters listed in the index under their traditional "correct" radical have **bold** Nelson numbers.

- Within each radical group in the index, subheadings for residual stroke counts (see

Appendix 6) have been provided, with characters listed in Nelson number order under these subheadings. In some cases, a range of residual stroke counts has been combined into a single subgrouping. Here, too, Nelson number order is used within the subgrouping.

ANDREW NATHANIEL NELSON *was born in Great Falls, Montana, in 1893. He received his B.A. from Walla Walla College and his Ph.D. from the University of Washington. As a Seventh-day Adventist missionary in Asia between 1918 and 1961, Dr. Nelson played a prominent role in the fields of education and language training. Throughout his life, Dr. Nelson remained devoted to the study of the Japanese language and the fundamentals of Chinese.*

JOHN H. HAIG *is an associate professor of Japanese in the Department of East Asian Languages and Literatures at the University of Hawai'i at Mānoa, one of the largest departments of its kind in the United States.*

NOTE CONCERNING CHART INSIDE BACK COVER. These charts have been placed here as a handy reference for locating the more common radicals. The radicals are shown classified by the locations in which they most commonly appear (top, bottom, left, right, enclosure, lone). Not shown are the comparatively rare corner radicals or cases where the whole character is a radical.

See Appendices 3 and 4 for help in determining the radical of a character. The characters that are radicals by themselves are included in the charts of Appendix 5.
